

Protection and Sleek Style

PROTECTIMUS SLIM

SLIM Protectimus – is the pinnacle of technological progress; it combines convenient use and high level of protection for your data.

This token is a full-scale solution even though it is less than 1 millimeter thick. It includes an LCD screen, a clock, a processor, a management system, and batteries.

Style and Modernity

The name speaks for itself: the Protectimus SLIM model does not only work well, it also looks great. What's more, you can always order your own design and re-branding.

Delight and Functionality

Imagine how surprised your colleagues and friends would be if a nice-looking bank card suddenly 'came to life' in your hands to display changing digits on it! They would be further surprised to learn that it is not just a stylish little thing, but also a reliable data protection tool.

Technology Perfection

The SLIM model token is the same size, including its thickness, as a regular bank card. Think how many elements there are in a computing machine... And now think that all that is included in a tiny box no thicker than your regular credit card.
