Simply create it and use it

PROTECTIMUS MAIL

This token will allow you to receive one-time passwords to the email address you specify. It is very easy to create and use this type of token. You do not need to gather additional information on users; you only need to know their email addresses to increase your users' security.

It is the most simplified protection option, since a user's inbox is already protected with a password. You should take it into consideration that the level of security this token provides is lower compared to other tokens, especially if the same password is used to access email and your resource.

Simplicity of Use

To authenticate a user, you only need to know the user's email address, which is most frequently used as a login/user name. This means that you will be able to increase your resource's level of security without performing any other actions or annoying users with requests to fill out additional forms.

No Cost

This token is absolutely free. You do not need to purchase any devices, or pay for SMS-messages. Simply create it and use it.

Key Features

- One-Time Password delivery via e-mail;
- A user's email address is sufficient to create a token;
- No additional user instructions are necessary;
- No costs involved.
